

Datacard® IDCentre™ Silver Identification Software

IDCentre Silver edition software delivers a user-friendly set of tools for card design, production or a combination of these capabilities.

Configure your ID program

The modular platform of Datacard® IDCentre™ Silver identification software lets you configure the ideal solution for your ID card program. Separate packages for card design and card production give you the choice to combine elements of these capabilities at a central location or manage them separately from different workstations. Either way, you control a powerful blend of components for creating ID cards, reports and production forms.

Flexible, modular platform

- Use IDCentre Silver Designer software to customize the look of your ID program. Design cards, reports and production forms using shape drawing, transparent backgrounds and ghost images.
- IDCentre Silver Production software offers image capture, data access and retrieval, and production capabilities.
- IDCentre Silver software is compatible with Datacard® CP40™, CP60™ and CP80™ card printers, Datacard® Capture Point™ Series software and the Datacard™ CS-100 camera.
- The Datacard® IDCentre™ View software feature provides view-only access to your database, which makes it easy to add checkpoints for visual verification.
